

One Health EJP Joint SimEx/Dissemination Workshop

A One Health Simulation Exercise as a roadmap for future foodborne outbreak preparedness

Date: 6th December 2022, 13.00 - 16.00 CET

Location: Virtual, free to attend event

Further information [here](#)

Organised by OHEJP [Work Package 5](#) in collaboration with OHEJP [Work Package 4](#), this dissemination workshop is a tool to disseminate research outcomes to policy and decision makers at the national, European and international level. These workshops focus on applicability, and are tailored to provide useful information to those involved in coordinating practical implementation and those involved in wider strategic future plans.

ONE Health EJP

#OneHealthEJP #OHEJPDissemination

The One Health EJP is a European collaboration across the fields of public health, animal health and food safety.

With the aim of disseminating its scientific outcomes to decision makers and policy makers, the One Health EJP is organising a series of Dissemination Workshops. These workshops focus on the applicability of the produced solutions and how these can benefit the prevention, detection, and response to infectious disease threats.

Joint SimEx/Dissemination Workshop: A One Health Simulation Exercise as a roadmap for future foodborne outbreak preparedness

Participation in simulation exercises can strengthen One Health preparedness, by identifying gaps in institutional and national preparedness plans and procedures and by providing clarity on roles and responsibilities.

The One Health EJP SimEx was a table-top exercise on a *Salmonella* Typhimurium outbreak at national level that involved both the food chain and pet feed chain. The One Health EJP SimEx aimed to assess interdisciplinary collaboration capacity and information flow between institutions involved in One Health, public health, animal health and/or food safety in countries across Europe.

This Dissemination Workshop will highlight the main outcomes from the One Health EJP SimEx. These include good practices currently in place and the major gaps identified, based on the results of the collective experience of 11 countries, as well as insights and recommendations for implementation and improvement.

Attendees of the SimEx Dissemination Workshop can expect to become inspired to pursue a One Health approach and become better equipped to support decision making to address the identified gaps.
